As a versatile developer with extensive experience in Salesforce, full-stack, and front-end development, I specialize in automating processes, developing applications, and enhancing user interfaces.

At ERP Group of Companies, I automated attendance tracking using Python and Salesforce, designed Apex triggers, and optimized workflows, flows, and page layouts. At Fedaris, I created React Native apps, managed Strapi databases, and developed Chrome extensions, contributing to WordPress and React projects. At Reboost, I developed React-based web templates, managed websites, and specialized in front-end UI/UX design.

I'm passionate about leveraging technology to solve problems and improve efficiency. Let's connect to discuss how I can contribute to your technology initiatives.

Work Experience

Senior Salesforce Developer

Erp GOC-Karachi

October 2023 to Present

Attendance Automation Project:

• I have made an Automated attendance tracking by integrating Google Mail inbox with Salesforce using Python.

• Developed a system to automatically fetch attendance data from emails and create new attendance records in Salesforce.

• Apex Triggers:

• Designed and implemented Apex triggers to handle scenarios with incomplete information from Gmail inbox.

• Created triggers to match unique information between Salesforce and Google to fill in missing data.

• Salesforce Workflows:

• Maintained and optimized Salesforce workflows to ensure smooth business processes and data management.

• Salesforce Flows:

• Worked on designing and implementing Salesforce Flows for various business requirements to automate and streamline processes.

• Salesforce Page Layouts:

• Managed and customized Salesforce page layouts to enhance user experience and data accessibility.

• User Management:

• Handled user management tasks including user setup, roles, permissions, and profile maintenance to ensure security and proper access controls.
